

Stainless Steel Rebar

Compliant with AS/NZS 4671: 2001 Steel Reinforcing Materials
TMR Registered Supplier

Product Information

Stainless steel reinforcing bar has a wide range of applications when there is a specific requirement relating to corrosion resistance, durability and maintenance.

Stainless steel reinforcing is typically used in order to ensure a high level of corrosion resistance, usually because future maintenance or repair will be difficult to accomplish & carried out infrequently.

Stock Stainless Steel Bar

Product Code	Diameter	Length
SS12300B	12mm	300mm
