

Ligatures

Compliant with AS/NZS 4671: 2001 Steel Reinforcing Materials

TMR Registered Supplier

Product Information

Ligatures, also commonly known as fitments, are pieces of steel reinforcing bar which are used to create reinforcing steel cages. Ligatures are often used to assist in creating footing cages, pile cages, bored piers, column cages, walls and suspended beams.

Ligatures serve two main purposes:

- Separate bars at the specified spacing
- Increase integrity and strength of the structure

Stock ligatures are available for order in regular shapes and sizes. If the size you require is not available in stock, we can manufacture ligatures to suit your custom specification requirement.
