

NEUMANN STEEL
REINFORCING

Metal Bar Chairs

20mm to 360mm high
High strength
Available in large quantities
Plastic dipped tips

Metal Bar Chairs are used to support steel reinforcing in position while the concrete is being poured. The primary benefit of using steel bar chairs to support reinforcing steel is the extra strength they provide ensuring that the reinforcing structure will stay fixed in position during the concrete pour.

Pool builders often need to create unique and unusual shapes to structures and this can make it challenging to keep the steel reinforcing in the correct position with plastic bar chairs that may bend or break.

Stock Sizes

Product Code	Height (mm)	Pack Quantity
BCPT20	20mm	200
BCPT25-BCPT100	25mm-100mm	100
BCPT110-BCPT170	110mm-170mm	50
BCPT180-BCPT360	180mm-360mm	25
