

NEUMANN STEEL
REINFORCING

Base Plates

Compliant with AS.NZS 2425:2015
Provides additional stability
Available in large quantities
Available in 2 sizes

Metal Base Plates (sometimes known as dinner plates) are typically used in conjunction with plastic or metal bar chairs.

They are used when the ground where the concrete is being poured is soft or sandy as the legs of the bar chairs can dig into the ground under the weight of the reinforcing steel.

Stock Sizes

Product Code	Diameter (mm)
BASE152	152
BASE224	224
